

The Story

Quinn's house is located between three towns. Each town has a car dealership selling a used Volkswagen Beetle Convertible that he wants to buy. He made a call to each dealer to find out what he could get it for.

The Dealer in Midtown said, "Our price is \$8,195, and Midtown sales tax is 5%."

The dealer in Riverside said, "It's in stock for \$8,849, but Riverside's sales tax on cars is only 3% so you should buy it here. Also, all Used Cars are 7% off this week!"

The dealer in Hillsville said, "We have that car for \$9,339, but for you, Quinn, I'm going to knock off 15% off that price. The sales tax here is 6.5%

The Problem

Which dealer will give Quinn the best final price for the car?
